To Whom It May Concern:

I am an Ophthalmologist and hold certification with the American Board of Ophthalmology. I have devoted my career to ophthalmic plastic and reconstructive surgery over the last 25 years.

I've had long experience using Medpor® polyethylene implants for my surgeries, and in 2015 was introduced to Su-Por® Surgical Implants. I found the implants to have similar properties preferable for my technique.

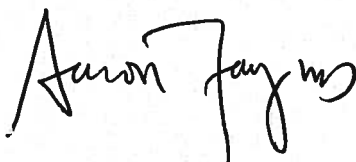

After using Su-Por implants for over two years, I am happy with the results I can achieve with this product and plan to continue using Su-Por as my primary implant in the future.

Furthermore, the Flor-Tec Composite Orbital Floor, CAT number 4233, 4232, and 4244 is a useful implant. The Cor-Tech Sphere ocular implant, CAT number 4042, 4045, and 4047 is a useful implant.

I have no financial interest in Poriferous or any Su-Por Surgical Implant product.

There are no financial ties in connection with this letter.

Sincerely,

Aaron Fay, M.D.
